

AWS Application Modernization Accelerator

Intuitive.Cloud

Why Modernize?

Businesses today face several critical challenges with legacy applications, prompting the need for modernization. The bulk of which include, high operational costs, performance and scalability issues, security vulnerabilities and increased business continuity risks.

By addressing these issues through application modernization, businesses can reduce costs, improve performance, enhance security, and drive innovation. Ultimately positioning your business to operate more effectively and meet growing demands.

Migrate your application to EKS / ECS:

Intuitive is your go-to expert for turbocharging container adoption. With our proven approach and pre-built Intuitive accelerators for infrastructure management and container deployment, we fast-track your modernization & migration to EKS or ECS, getting you up and running in no time.

Intuitive EKS/ECS Accelerators

About Intuitive:

Intuitive Cloud is a global leader in delivering innovative cloud solutions that drive digital transformation and business excellence. Specializing in areas such as Application Modernization, DevSecOps, DataOps, AI & ML, and Cybersecurity, we partner with top enterprises to provide end-to-end solutions tailored to their unique needs. Our customer-centric approach ensures scalable, secure, and cost-effective outcomes, making us the trusted partner for organizations seeking to modernize and thrive in the digital era.

How we can help:

Leveraging our expertise in application modernization, we offer a tailored strategy to revitalize your digital assets. Our approach encompasses front-end rejuvenation, back-end upgrades, and complete application overhauls, ensuring your technology stack is agile, efficient, and aligned with contemporary business needs. Leveraging our GenAI modernization accelerator, we can innovate faster and streamline your modernization journey.

Sizing Your Modernization Effort:

With each of our t-shirt offerings, we will modernize and migrate your application to an AWS-managed container platform, whether EKS or ECS. Evolving your environment from Pilot stages to full-scale Production, tailored to your specific requirements and objectives.

6+ months / application

- **Current State:**
Monolith application architecture, hosted on virtual machines
- **Target State:**
Re-architect application as microservices architecture and deploy on EKS / ECS

2+ months / application

- **Current State:**
Microservices architecture, hosted on virtual machine
- **Target State:**
Deploy microservices on EKS / ECS

3+ weeks / application

- **Current State:**
Containerized microservices architecture, hosted on GKE, AKS, etc.
- **Target State:**
Migrate container application to EKS / ECS
